Credit Name: CSE2130 - File Structures & Exception Handling
Assignment Name: Count Vowels

Error Log Entry

1. What error message did you encounter (if any)?

No compiler error occurred, but the program produced an incorrect vowel count because it did not recognize uppercase vowels.

2. What unexpected behaviour did your program exhibit?

When I entered text containing uppercase vowels, the program failed to count some of them. For example, entering "JAVA Programming" resulted in a count that was lower than the actual number of vowels.

3. What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.)

The issue was a logic error. The program checked for lowercase vowels only, so uppercase vowels such as A and A in "JAVA" were ignored.

4. Include a screenshot of specific lines of code.

```
char letter = text.charAt(i);

if (letter == 'a' || letter == 'e' || letter == 'i'
      || letter == 'o' || letter == 'u') {
   count++;
}
```

5. How did you fix the issue?

I fixed the issue by using Character.toLowerCase() to convert each character to lowercase before checking whether it was a vowel. This allows the program to recognize both uppercase and lowercase vowels.

6. Provide the corrected code or solution using a screenshot.

```
char letter = Character.toLowerCase(text.charAt(i));

if (letter == 'a' || letter == 'e' || letter == 'i'
      || letter == 'o' || letter == 'u') {
   count++;
}
```
