Credit Name: CSE2130 - File Structures & Exception Handling
Assignment Name: Word Guess

Error Log Entry

1. What error message did you encounter (if any)?

The program showed a FileNotFoundException because it could not find the words.txt file.

2. What unexpected behaviour did your program exhibit?

The program stopped running before the word guessing game could start.

3. What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.)

The file was missing or saved in the wrong folder, so Java could not find it.

4. Include a screenshot of specific lines of code.

```
Scanner fileInput = new Scanner(new File("words.txt"));
```

5. How did you fix the issue?

I created a file called words.txt and put it in the correct project folder. I added one word per line so the program could choose a random word.

6. Provide the corrected code or solution using a screenshot.

```
Scanner fileInput = new Scanner(new File("../Chapter11/src/Mastery/words.txt"));
```
