Reflection on Code

Credit Name: CSE2130 - File Structures & Exception Handling
Assignment Name: Count Vowels

The following questions can help you in thinking critically about your problem-solving processes:

Understanding the Problem
How did you approach understanding the challenge?
Were there any parts of the problem you found confusing at first? If so, how did you resolve that confusion?

I started by figuring out how to get the user to enter text and how to count the vowels in that text. I was a little confused about how to check each letter, but I learned that a loop could go through the text one character at a time.

Planning the Solution
Did you create a plan or break the problem into smaller steps before coding?
How did you decide on the tools, data structures, or algorithms to use?

I broke the problem into smaller steps. First, I got the text from the user, then checked each character to see if it was a vowel, and finally displayed the total. I used a Scanner to get the input and a counter to keep track of the vowels.

Implementation
Did you write the code in small pieces or attempt the entire solution at once?
How did you handle moments when you felt stuck or unsure of what to do next?

I wrote the code in sections, starting with the user input and then adding the loop and vowel checks. When I was unsure what to do next, I looked at the code and checked how each part worked together.

Overcoming Challenges
What part of the problem was the most difficult for you?
How did you handle moments when you felt stuck or unsure of what to do next?

The hardest part was checking each character and making sure uppercase and lowercase vowels were counted. I used Character.toLowerCase() to make the checks easier because I only had to check for lowercase vowels.

Learning
Was there anything you learned that you think will help you with future challenges?

I learned how to use loops and if statements to check characters in a string. I also learned how to use a counter to keep track of a result, which will help me with future Java assignments.
