# Reflection on Code

Credit Name: CSE2130 - File Structures & Exception Handling
Assignment Name: Word Guess

**The following questions can help you in thinking critically about your problem-solving processes:**

**Understanding the Problem**
How did you approach understanding the challenge?
Were there any parts of the problem you found confusing at first? If so, how did you resolve that confusion?

I started by figuring out how to make the program choose a random word from a file instead of using the same word every time. I was confused at first about how to read the words from the file, but I figured out how to use a Scanner to read each line.

**Planning the Solution**
Did you create a plan or break the problem into smaller steps before coding?
How did you decide on the tools, data structures, or algorithms to use?

I broke the problem into smaller steps. First, I read the words from the file, then I used a random number to select a word, and finally I used that word in the guessing game. I used an array to store the words and Random to choose one.

**Implementation**
Did you write the code in small pieces or attempt the entire solution at once?
How did you handle moments when you felt stuck or unsure of what to do next?

I wrote the code and tested it to see if it worked. When I got stuck, I looked at the code and tried to understand what was causing the problem before making changes.

**Overcoming Challenges**
What part of the problem was the most difficult for you?
How did you handle moments when you felt stuck or unsure of what to do next?

The hardest part was getting the program to read the file and select a random word. I worked through the problem by checking the code and making sure the file was in the correct folder.

**Learning**
Was there anything you learned that you think will help you with future challenges?

I learned how to read words from a file and choose one randomly. This will help me with future assignments because I understand more about using files, arrays, and random numbers in Java.
