

Reflection on Code

Credit Name: CSE 3010 - Computer Science 3

Assignment Name: SchoolDetails.java

The following questions can help you in thinking critically about your problem-solving processes:

Understanding the Problem

How did you approach understanding the challenge?

Were there any parts of the problem you found confusing at first? If so, how did you resolve that confusion?

I approached the challenge by first looking at the different components the GUI needed, such as text fields, combo boxes, a submit button, and school images. At first, I was confused about how to make the selected school display the correct logo, but I resolved this by using if and else if statements based on the selected school.

Planning the Solution

Did you create a plan or break the problem into smaller steps before coding?

How did you decide on the tools, data structures, or algorithms to use?

I broke the problem into smaller parts by creating the GUI components first and then adding the functionality for the Submit button. I decided to use JTextField for the names, JComboBox for the grade and school selections, and ImageIcon for the school logos.

Implementation

Did you write the code in small pieces or attempt the entire solution at once?

How did you handle moments when you felt stuck or unsure of what to do next?

I built the program in small sections instead of trying to write everything at once. I created the interface first, then added the button's ActionListener to collect the information and display the results.

Overcoming Challenges

What part of the problem was the most difficult for you?

How did you handle moments when you felt stuck or unsure of what to do next?

The most difficult part was getting the school images to fit properly inside the SchoolLogo box while still being accessible inside the ActionListener. I had to scale the images and make the image variables final so Java would allow them to be used inside the button's event code.

Learning

Was there anything you learned that you think will help you with future challenges?

I learned more about using event-driven programming, especially how ActionListener responds to button clicks. I also learned how to work with ImageIcon, scale images, and use conditional statements to make a GUI respond to different user selections.
